

README

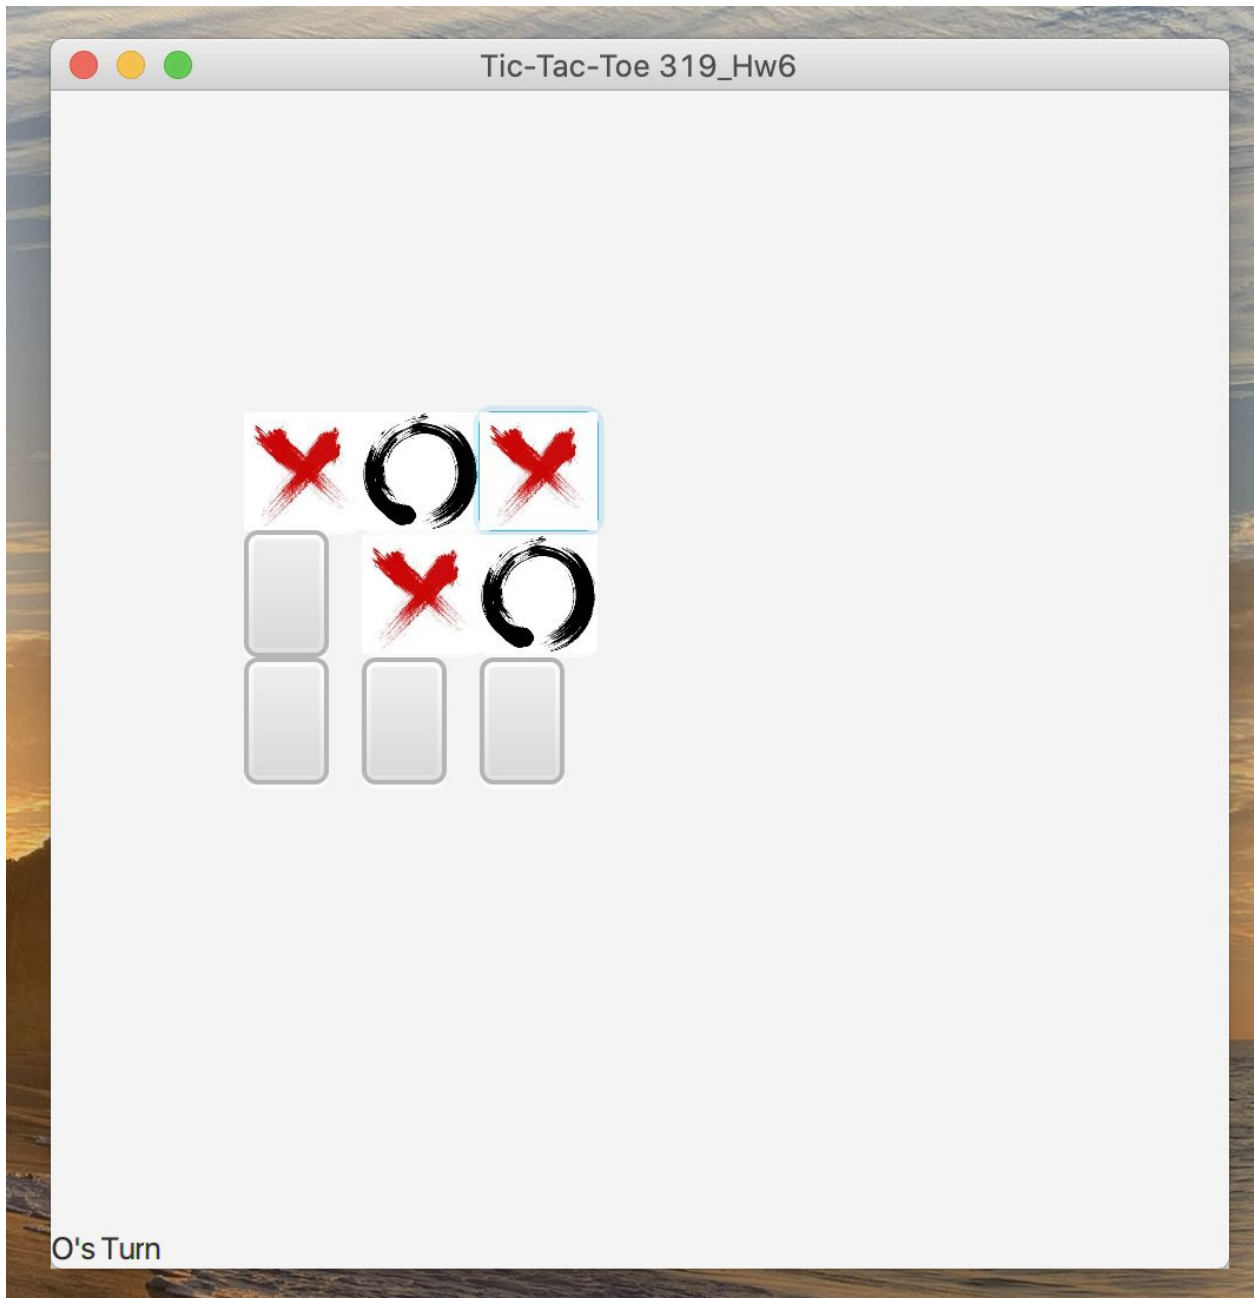

1. open project in eclipse or other IDE
2. start main class
3. play tic tac toe

REPORT

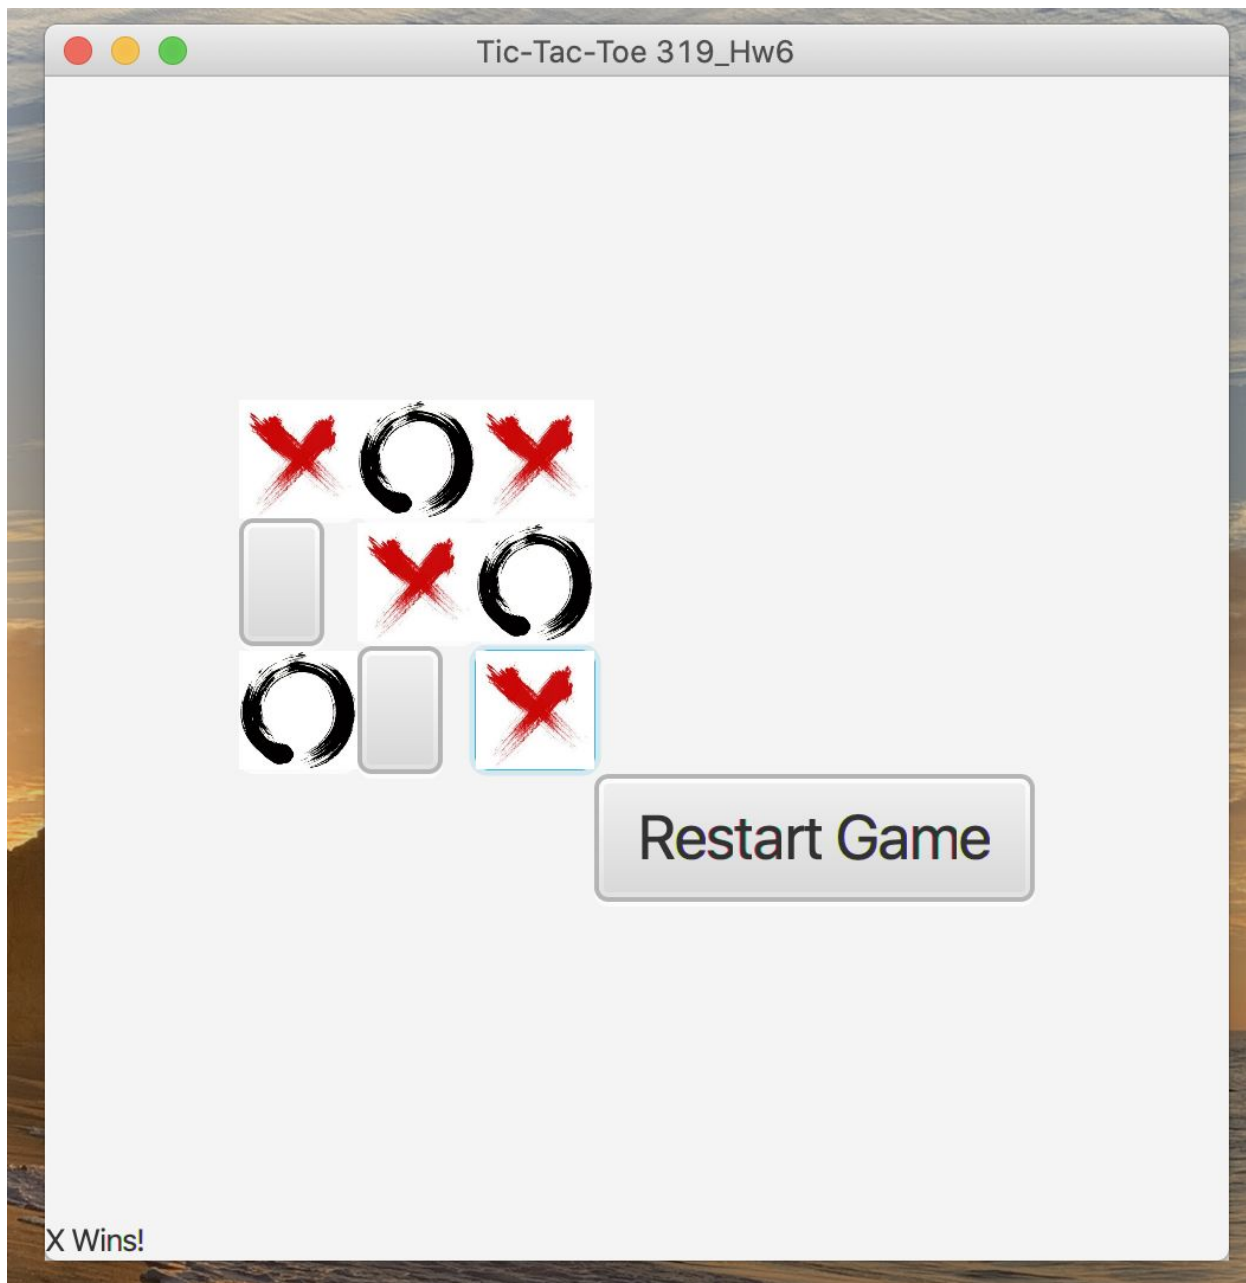

here my solution was to make each place on the tic tac toe board into a button that was clickable but depending on who's turn it is (X always going first), the button would change to that picture.

Here you can see after 4, clicks the corner label has changed to “O’s Turn”

Here after X wins the label in the corner has changed to “X Wins!” and the ‘Restart’ button has appeared

after clicking the restart button the game will reload and appear like this
